

DigiSol Hub - Local Trades Outreach

How to execute the Local Trade Business Outreach workflow (website audit sequence). Store this PDF in Hub - Files for operator reference.

Updated 2026-09-20

What this workflow does

When a new lead is created for DigiSol (consult form, Hub lead, or contact marked as a lead), the enabled workflow tags them into the trades outreach track, sends the first audit email, waits 4 days, sends a follow-up, then marks the sequence complete.

Sequence (as saved in Hub)

- Trigger: New lead
- Tag: outreach_trades - lead entered the trades audit sequence
- Send: Initial audit outreach email (attach template in editor)
- Tag: email_1_sent - first email recorded
- Wait: 4 days
- Send: Follow-up email (attach second template)
- Tag: follow_up_sent - follow-up recorded
- Tag: sequence_completed - sequence finished

Before you enable

- Working on: DigiSol (or the client company that owns these leads).
- Email - create two templates (Initial audit outreach + Follow-up). Use merge fields {{name}}, {{company}}, {{contact_company}}.
- Campaigns - open Local Trade Business Outreach - click each Send step - pick the matching template - Save workflow.
- Confirm Resend is configured (Hub - Integrations). Test with Run now on one contact before enabling live.
- Flip Enabled on only when templates are attached and a test run looks clean.

How to execute day to day

- New trades leads enter via the DigiSol contact form or Hub Contacts/Leads. That fires hub/lead.created - this workflow if Enabled.
- Monitor Campaigns - Monitoring for workflow runs and email opens/clicks.
- Filter Contacts by tags outreach_trades, email_1_sent, follow_up_sent, or sequence_completed for weekly audits.
- If someone replies or books a consult, add a manual tag (e.g. consulted) and pause further outreach outside this sequence as needed.
- A/B test subject lines on Campaigns when you want to compare copy for the same industry before locking the sequence templates.

Tag catalogue

- outreach_trades - Local trades lead entered the website audit outreach sequence.
- email_1_sent - Initial audit outreach email was sent.
- follow_up_sent - Day-4 follow-up email was sent.
- sequence_completed - Full Local Trades outreach sequence finished.

Editing later

Open the workflow canvas anytime to change tag names, tag descriptions, wait length, or templates. Save syncs tag descriptions into Hub CRM tags. AI Workflow Generator can propose new sequences; keep this PDF as the operator playbook for the Local Trades track.

Checklist

- ☐ Templates written and attached to both Send steps
- ☐ Test Run on one subscribed contact
- ☐ Workflow Enabled
- ☐ Weekly tag audit (outreach_trades - sequence_completed)
- ☐ This PDF saved under Hub - Files
